Question ID : 1034352900

Comprehension:

Read the following information carefully and answer the given questions.

The devastation caused by extreme weather in Tamil Nadu remains a damning indictment on India's ability to effectively address such emergencies, whether that be taking preventative measures or actually coping with the aftermath with a proper disaster management plan.

Cyclone Gaja saw 45 deaths reported, crops destroyed and livestock killed. One farmer committed suicide after his small coconut plantation – his main source of income – was destroyed. People were traumatised in coastal districts that were unprepared for winds of the speed of 160km/h – a category 2 tropical cyclone according to the Saffir-Simpson hurricane wind scale. Millions of trees were uprooted, agricultural land devastated, transportation blocked by debris, communications downed and there were power outages for eight weeks. Three months on and there is still only a limited power supply to some remote areas.

It was this very same southern state which faced Cyclone Ockhi in 2017, Cyclone Vardah in 2016, man-made flooding in Chennai in 2015, and of course, the Boxing Day Indian Ocean tsunami in 2004. Around 300 Tamil Nadu fishermen missing after Cyclone Ockhi have never been found.

India is part of the Sendai Framework, an organisation that helps participating countries to adopt disaster risk reduction as a key goal in achieving a sustainable society. The country only released its first national disaster management plan in 2016, despite all of the states on the Bay of Bengal having a history of extreme weather events.

Cyclone Gaja stands as a warning to international disaster organisations; they must prepare the countries they work with more thoroughly for future weather disasters. They need to make clear that taking measures to limit the extent of disaster cannot be voluntary, but mandatory.

It will take months to clear the debris and repair the infrastructure, and years to rehabilitate entire villages across Tamil Nadu. It is time to establish a proper framework that helps developing countries to facilitate an effective response to an emergency, crucially with the help of other, more developed nations.
