Q.10 In the following number-pairs, the second number is obtained by applying certain mathematical operation(s) to the first number. Which numbers should replace X and Y, so that the pattern followed by the two numbers on the left side of :: is the same as that on the right side of ::?
(NOTE: Operations should be performed on the whole numbers, without breaking down the numbers into their constituent digits. E.g. 13 – Operations on 13 such as adding to/subtracting from/multiplying with 13 can be performed. Breaking down 13 into 1 and 3 and then performing mathematical operations on 1 and 3 is not allowed.)

12 : X :: Y : 3416

- Ans ☒ 1. X = 8; Y = 6
☒ 2. X = 5; Y = 12
☒ 3. X = 8; Y = 5
☒ 4. X = 10; Y = 5

Comprehension:

Read the following passage carefully and answer the questions that follow.

Clouds are made up of tiny water droplets or ice crystals that form when water vapour in the atmosphere cools and condenses around a tiny particle of dust or salt floating in the atmosphere. Without these particles, known as condensation or ice nuclei, raindrops or snowflakes cannot form and precipitation will not occur.

Cloud seeding is a weather modification technique that improves a cloud's ability to produce rain or snow by introducing tiny ice nuclei into certain types of subfreezing clouds. These nuclei provide a base for snowflakes to form. After cloud seeding takes place, the newly formed snowflakes quickly grow and fall from the clouds back to the surface of the Earth, increasing snowpack and streamflow.

Cloud seeding can be done from ground-based generators or aircraft. The DRI Cloud Seeding Research Program primarily uses ground-based generators, which are designed and built by DRI and can be operated remotely.²⁰

Comprehension:

Read the following passage carefully and answer the questions that follow.

Clouds are made up of tiny water droplets or ice crystals that form when water vapour in the atmosphere cools and condenses around a tiny particle of dust or salt floating in the atmosphere. Without these particles, known as condensation or ice nuclei, raindrops or snowflakes cannot form and precipitation will not occur.

Cloud seeding is a weather modification technique that improves a cloud's ability to produce rain or snow by introducing tiny ice nuclei into certain types of subfreezing clouds. These nuclei provide a base for snowflakes to form. After cloud seeding takes place, the newly formed snowflakes quickly grow and fall from the clouds back to the surface of the Earth, increasing snowpack and streamflow.
