Q.1 Eight people are sitting in two parallel rows containing 4 people each, in such a way that there is equal distance between adjacent persons.
In row 1 – B, C, E, and F are seated and all of them are facing south.
In row 2 – P, N, L, and J are seated and all of them are facing north.
Thus, each person faces another person from the other row. E sits second to the right of F.
The one facing F is an immediate neighbour of N. J sits to the immediate left of L and J faces C. C is not an immediate neighbour of F. Who among the following faces B?⁶³²

- Ans
- ☒ 1. L
 - ☒ 2. P
 - ☒ 3. J
 - ☒ 4. N

Q.5 Sentences of a paragraph are given below in jumbled order. Arrange the sentences in the correct order to form a meaningful and coherent paragraph.

- (A) For example, in 2021, the United Nations Food System Summit opened the dialogue between stakeholders from multiple fields and encouraged national actions to transform the food system. Most recently, the 28th Climate Conference of Parties resulted in a Declaration on sustainable agriculture, resilient food systems and climate action.
(B) Our health and active life critically depend on nutritious food. While agriculture and food production increased over the past decades, millions of people are still unable to meet their dietary needs, starkly contrasting the overconsumption and the enormous amount of food wasted daily.
(C) Policymakers worldwide are paying more attention to the whole food system — production, processing, distribution, consumption and the link to food security and farmers' livelihoods.
(D) While these political commitments are essential foundations of change, research is required to provide a scientific basis to support policy decisions and help design solutions that fit community needs.

Q.6 Sentences of a paragraph are given below in jumbled order. Arrange the sentences in the correct order to form a meaningful and coherent paragraph.

(A) In stars that are about 1.3 times bigger than the Sun, the CNO cycle drives the creation of energy. The CNO cycle also converts hydrogen to helium, but relies on carbon, nitrogen and oxygen (C, N and O) to do so.

(B) This process, known as a PP (proton-proton) chain reaction, emits an enormous amount of energy. In its core, the sun fuses about 620 million metric tons of hydrogen every second.

(C) The PP chain reaction occurs in other stars that are about the size of our Sun, and provides them with continuous energy and heat. The temperature for these stars is around 4 million degree on the Kelvin scale (about 4 million degree Celsius, 7 million degree Fahrenheit).

(D) Solar energy is created by nuclear fusion that takes place in the Sun. Fusion occurs when protons of hydrogen atoms violently collide in the Sun's core and fuse to create a helium atom.

Read the given passage and answer the questions that follow.

Flight accidents are among the most complex and heavily investigated events in modern transportation history. While rare compared to road or rail incidents, their severity and global visibility often amplify public concern. Typically, a flight accident is the result of a convergence of factors rather than a single catastrophic failure. These may include mechanical malfunction, human error, adverse weather conditions, lapses in communication, or systemic issues within air traffic control systems. One of the most notorious examples, the 2009 Air France Flight 447 crash, highlighted how a combination of instrument failure, inadequate crew response, and poor weather contributed to the tragedy. Investigations revealed that the pitot tubes, which measure airspeed, had iced over, sending conflicting data to the cockpit. The pilots, unsure of the correct response, entered into a fatal aerodynamic stall. This tragedy underscores a key reality in aviation safety: technological advancement does not eliminate the need for human judgment under pressure. Furthermore, flight accident investigations are not solely aimed at assigning blame. Instead, they are designed to uncover root causes, improve training protocols, update safety guidelines, and advance engineering practices. Aviation agencies like the NTSB (National Transportation Safety Board) and ICAO (International Civil Aviation Organization) emphasise preventive frameworks. The goal is not only to ensure accountability but to build resilience in a system where even minor lapses can have catastrophic consequences. Ultimately, understanding flight accidents involves an interdisciplinary approach that spans psychology, engineering, meteorology, and systems analysis. As air traffic continues to grow globally, so too must the precision of preventive strategies designed to keep passengers and crews safe.

SubQuestion No : 16

Q.16 What is the broader purpose of investigating flight accidents?

- Ans
- ☐ 1. To penalise the personnel responsible for the crash.
 - ☐ 2. To reveal criminal negligence in airline management.
 - ☐ 3. To reduce financial losses to airline companies.
 - ☒ 4. To establish systemic improvements in aviation safety.

Comprehension:

दिए गए गद्यांश के आधार पर निम्नांकित प्रश्नों के उत्तर दीजिए-

अशोककालीन संस्कृत में लिपि या लिपिक के लिए कोई शब्द न था इसलिए ये शब्द फ़ारसी से लेने पड़े। अशोक ने जो लिपि इस्तेमाल की, वह पवित्र ब्राह्मी लिपि भी उनके काल से कोई बहुत पुरानी नहीं थी। यह ब्राह्मी जो बायें से दायें लिखी जाती थी, हद से हद अशोक से एक सदी पहले जन्मी थी। स्वीकार किया जाना चाहिए कि इसको भारत के बाहर कहीं से लाकर यहाँ प्रचलित किया गया था तथा उसको यहाँ उसी प्रकार अपना लिया गया था जिस प्रकार आर्य यूनानियों ने हिब्रू लिपि को दायें से बायें लिखने के बजाय बायें से दायें लिखने का परिवर्तन कर अपनाया था। हमें ब्राह्मी के भारत में या विदेशों में विकास की किसी भी मंज़िल का ज्ञान नहीं है। उसका सिन्धु घाटी की भाव-चित्र लिपि से भी कोई सम्बन्ध नहीं जोड़ा जा सकता क्योंकि उसका यकायक अन्त हो गया, अनुमानतः लेखन से बिलकुल अनजान वैदिक आर्यों ने उस सभ्यता का नाश कर दिया। सिन्धु लिपि के विलुप्त हो जाने, यानी 15वीं सदी ई.पू. से लेकर ब्राह्मी के उदय, यानी 5वीं सदी ई. पू. तक एक लम्बा काल-व्यवधान है।

Q.9 Which of the following statements are correct?

Often the patient does not explain symptoms correctly and causes problems in following behavioural strategies as they want to blame others for neglecting them.
The person's strengths and weaknesses can be identified, and this information can be used in a wide range of issues, from assessing competence (e.g. driving ability) to finding compensatory strategies or helping the caregiver to understand the behaviour of the patient.
The principle of neuro rehabilitation is that changes in the activities of daily living or in the quality of life of the patient are the primary goal of intervention and these can be measured directly.
Relatives and care staff can misunderstand a range of neuropsychological impairments in older people, including, for example, visuospatial disturbances, neglect syndromes and executive dysfunction. If not properly recognised, this can result in inappropriate approaches to management.

Q.17 Which of the following statements are correct?

The clinical goals of finding correlates between brain pathology and behaviour symptoms are related to ways in which brain injuries affect behaviour and with procedures that try to alleviate symptoms. Non-invasive brain scanning tools like positron emission tomography allow scientists to see what changes are happening when behaviour is altered. Visual prototype formation is the main method by which behaviour changes are documented and analysed. This technique is relied on for multiple conditions. Behavioural disorders can be identified through brain scans. This provides a basis to track changes and medicate accordingly.
