Comprehension:

Read the given passage and answer the questions that follow.

India's traffic problem has become one of the most pressing urban challenges in the 21st century. With rapid urbanisation, rising disposable incomes and increased automobile ownership, the country's metropolitan and even tier-2 cities are witnessing chronic traffic congestion. According to the TomTom Traffic Index, cities like Bengaluru, Mumbai and Delhi consistently rank among the most congested cities globally. The situation is exacerbated by inadequate public transportation, poorly maintained roads and outdated traffic management systems.

Another significant contributor to the problem is the lack of urban planning that prioritises pedestrian mobility, non-motorised transport and intelligent traffic systems. In many areas, encroachments, unregulated parking and insufficient road signage further complicate traffic flow. As a result, commuting times have surged, air quality has deteriorated and productivity levels have dropped due to stress and lost man-hours.

The government has initiated multiple schemes such as Smart Cities Mission and Urban Mobility Plans to mitigate these concerns. Metro rail projects, dedicated bicycle lanes and traffic-signal synchronisation are some of the measures being adopted. Additionally, emerging technologies like AI-based traffic cameras, GPS-enabled traffic flow analytics and electric vehicle infrastructure are being piloted in select regions.

However, experts argue that unless behavioural changes accompany infrastructural reforms—like adherence to traffic rules, reduced reliance on private vehicles and promotion of carpooling—no lasting change can occur. Public awareness, stringent implementation of laws and coordinated urban development are essential for sustainable mobility.

The challenge of managing traffic in India is not merely logistical but social and environmental. Addressing it requires a multi-stakeholder approach that balances economic growth with environmental sustainability and urban livability.

SubQuestion No : 16

- Ans ☒ 1. Definition followed by listing of unrelated examples
- ☒ 2. Chronological development of traffic history in India
- ☒ 3. Problem-cause-effect-solution structure
- ☒ 4. Personal anecdote followed by analysis

Comprehension:

Read the given passage and answer the questions that follow.

India's traffic problem has become one of the most pressing urban challenges in the 21st century. With rapid urbanisation, rising disposable incomes and increased automobile ownership, the country's metropolitan and even tier-2 cities are witnessing chronic traffic congestion. According to the TomTom Traffic Index, cities like Bengaluru, Mumbai and Delhi consistently rank among the most congested cities globally. The situation is exacerbated by inadequate public transportation, poorly maintained roads and outdated traffic management systems.

Another significant contributor to the problem is the lack of urban planning that prioritises pedestrian mobility, non-motorised transport and intelligent traffic systems. In many areas, encroachments, unregulated parking and insufficient road signage further complicate traffic flow. As a result, commuting times have surged, air quality has deteriorated and productivity levels have dropped due to stress and lost man-hours.

The government has initiated multiple schemes such as Smart Cities Mission and Urban Mobility Plans to mitigate these concerns. Metro rail projects, dedicated bicycle lanes and traffic-signal synchronisation are some of the measures being adopted. Additionally, emerging technologies like AI-based traffic cameras, GPS-enabled traffic flow analytics and electric vehicle infrastructure are being piloted in select regions.

However, experts argue that unless behavioural changes accompany infrastructural reforms—like adherence to traffic rules, reduced reliance on private vehicles and promotion of carpooling—no lasting change can occur. Public awareness, stringent implementation of laws and coordinated urban development are essential for sustainable mobility.

The challenge of managing traffic in India is not merely logistical but social and environmental. Addressing it requires a multi-stakeholder approach that balances economic growth with environmental sustainability and urban livability.

Comprehension:

गद्यांश के आधार पर निम्नलिखित प्रश्नों के उत्तर दीजिए-

अप्रैल 1945 में संयुक्त राष्ट्र संघ के घोषणा-पत्र का मसविदा बनाने के लिए होने वाली सेन फ्रांसिस्को-कांफ्रेंस से पहले भारतीय तथा विदेशी संवाददाताओं ने महात्माजी से वक्तव्य माँगा। गांधी जी ने दृढ़ता से कहा - "भारत की राष्ट्रीयता का अर्थ है अंतर्राष्ट्रीयता। जबतक मित्र राष्ट्र युद्ध की प्रभावकारी शक्ति में तथा उसके साथ चलने वाली धोखा-धड़ी और जालसाजी में विश्वास नहीं त्याग देते और जबतक वे सब जातियों और राष्ट्रों की आजादी तथा समानता पर आधारित सच्ची शांति गढ़ने के लिए दृढ़ संकल्प नहीं होते, तबतक न तो मित्रराष्ट्रों के लिए शांति है, न संसार के लिए। भारत की आजादी संसार की सब शोषित जातियों को प्रदर्शित कर देगी कि उनकी आजादी निकट है और आगे से किसी भी हालत में उनका शोषण नहीं किया जाएगा।"

"शांति औचित्यपूर्ण होनी चाहिए।" गांधीजी ने आगे कहा - "उसमें न तो दंड और न ही बदले की भावना के लिए स्थान होना चाहिए। जर्मनी और जापान अपमानित नहीं होने चाहिए। सशक्त कभी बदले की भावना नहीं रखता। इसलिए शांति के फल का समान वितरण होना चाहिए। तब प्रयत्न उनको मित्र बनाने का होगा। मित्रराष्ट्र अपने लोकतंत्र को अन्य किसी उपाय से सिद्ध नहीं कर सकते।" लेकिन उन्हें डर था कि सेन फ्रांसिस्को-कांफ्रेंस के पीछे अविश्वास और भय की घटाएँ थीं, जो लड़ाई को जन्म देती हैं। गांधीजी जानते थे कि आजादी शांति की जुड़वा बहन है और निर्भयता दोनों की जननी है।

A. Thematically, the line 'You know that the soot cannot spoil your white hair' shows the development from innocence to maturity.

B. The above lines ironically suggest that now the beautiful white hair won't be tainted by the dark soot; however, the incident of shaving the head will forever be impressed upon the innocent mind of the child as a reminder of the dark realities of the world. The child who consoles his friend with the above lines is still viewing the world in an optimistic light despite the circumstances but the child who has been tonsured can't share this optimism.

- Ans
- ☒ 1. A is false, but B is true.
 - ☒ 2. Both A and B are correct, but B does not support the claim made by A.
 - ☒ 3. A is true, but B is false.
 - ☒ 4. Both A and B are true, and B supports the claim that A makes.

Q.3 Identify the structure of the following passage.

The invention of Braille was a major turning point in the history of disability. The writing system of raised dots used by visually impaired people was developed by Louis Braille in nineteenth-century France. In a society that did not value disabled people in general, blindness was particularly stigmatised, and lack of access to reading and writing was a significant barrier to social participation. The idea of tactile reading was not entirely new, but existing methods based on sighted systems were difficult to learn and use. As the first writing system designed for blind people's needs, Braille was a groundbreaking new accessibility tool. It not only provided practical benefits but also helped change the cultural status of blindness.

Comprehension:

Read the given passage and answer the questions that follow.

In the modern world, progress is often synonymous with improvement. However, as we race towards technological advancements and societal changes, we sometimes fail to recognise the paradoxical nature of progress. While we have developed unprecedented conveniences, from smartphones to artificial intelligence, we have also encountered unforeseen consequences. The more we advance, the more we seem to distance ourselves from nature and the essence of human interaction. Environmental degradation, social isolation and the erosion of traditional values are the darker side effects of our relentless pursuit of progress.

Progress, in its pursuit of efficiency and speed, has inadvertently created a world where people are increasingly disconnected from one another. The rise of social media, while allowing for instant communication, has made personal interactions more superficial. The promise of technological advancement has failed to deliver the profound sense of fulfillment that many expected. While the conveniences of modern life are undeniable, they come at the cost of our emotional and environmental well-being. We may have solved many practical problems, but at the expense of losing touch with the deeper human connections that once defined our societies. In our relentless race forward, we have ignored the profound need for balance between advancement and maintaining the values that make life meaningful.

As we continue on this path, it is essential to pause and reflect on whether the price we are paying for progress is truly worth it. Can we achieve a balance between technological development and maintaining a connection to our roots? Can we truly progress without losing the human aspects that make life meaningful?

Comprehension:

Read the given passage and answer the questions that follow.

The 21st century has witnessed an unprecedented evolution in artificial intelligence (AI), reshaping the way humans interact with technology. With the advent of neural networks, machine learning and deep learning, AI has infiltrated nearly every sector, from healthcare to finance and from entertainment to governance. While some celebrate AI as the dawn of a new intellectual revolution, others express deep concerns about its ethical implications. The ability of AI to process vast amounts of data within milliseconds presents both an opportunity and a threat—enabling innovations while simultaneously raising issues regarding surveillance, privacy and job displacement.

Historical parallels exist; the Industrial Revolution, for example, mechanised production but also displaced workers, leading to socio-economic shifts. Today, AI is at a similar crossroads, and the world must carefully navigate the balance between innovation and ethical responsibility. Policymakers, technologists and ethicists must engage in continuous dialogue to ensure that AI serves humanity rather than undermining it. The core question remains: Will AI empower society, or will it exacerbate inequalities? The answer depends on how humans choose to wield this transformative power.

Beyond economic and ethical concerns, AI also raises philosophical questions about human identity and creativity. As AI-generated content becomes more sophisticated, distinguishing between human and machine-made works is increasingly challenging. The implications for authorship, intellectual property and artistic expression are profound. If AI can compose music, write literature and generate paintings, what does it mean to be truly creative? These concerns further highlight the necessity of ethical oversight and regulation. While AI has the potential to revolutionise industries and elevate human capabilities, unchecked advancements may lead to unforeseen consequences that reshape the very fabric of society. Thus, a balance between technological progress and ethical vigilance is essential for a sustainable future.

Speculative fiction has given way to pressing realism in the conversation about artificial intelligence (AI) in recent years. As AI is used more and more in fields like healthcare, education, finance and national security, stakeholders are facing previously unheard-of ethical, societal and legal ramifications. Although AI systems have the potential to boost productivity and creativity, they also bring up difficult issues with accountability, transparency and prejudice.

Algorithmic bias in which AI systems mirror or even magnify preexisting societal disparities is one particularly controversial topic. Facial recognition software frequently misidentifies members of minority groups more frequently than others, according to studies. Similar to this, even if gender or race is not specifically included in the algorithm, AI-driven hiring tools may prejudice applicants based on these factors. These results highlight the need for inclusive data sets and stricter management.

Furthermore, a major problem with many AI models, especially those based on deep learning, is their opacity. Known as 'black box' systems, these models are capable of producing incredibly precise forecasts without offering clear explanations. This inability to be interpreted damages public confidence and makes regulatory actions more difficult.

The challenge of how to strike a balance between innovation and accountability still stands as governments and institutions start to design frameworks for AI governance. It is not just ideal, but crucial to use a multidisciplinary strategy that includes ethicists, technologists, legal experts and impacted populations. AI's transformational potential can only be realised for equitable advancement through proactive regulation and inclusive discourse.

Furthermore, a major problem with many AI models, especially those based on deep learning, is their opacity. Known as 'black box' systems, these models are capable of producing incredibly precise forecasts without offering clear explanations. This inability to be interpreted damages public confidence and makes regulatory actions more difficult.

The challenge of how to strike a balance between innovation and accountability still stands as governments and institutions start to design frameworks for AI governance. It is not just ideal, but crucial to use a multidisciplinary strategy that includes ethicists, technologists, legal experts and impacted populations. AI's transformational potential can only be realised for equitable advancement through proactive regulation and inclusive discourse.

SubQuestion No : 18

Option 2 ID : 4410091127112
Option 3 ID : 4410091127114
Option 4 ID : 4410091127113

Comprehension:

Read the given passage and answer the questions that follow.

Speculative fiction has given way to pressing realism in the conversation about artificial intelligence (AI) in recent years. As AI is used more and more in fields like healthcare, education, finance and national security, stakeholders are facing previously unheard-of ethical, societal and legal ramifications. Although AI systems have the potential to boost productivity and creativity, they also bring up difficult issues with accountability, transparency and prejudice.

Algorithmic bias in which AI systems mirror or even magnify preexisting societal disparities is one particularly controversial topic. Facial recognition software frequently misidentifies members of minority groups more frequently than others, according to studies. Similar to this, even if gender or race is not specifically included in the algorithm, AI-driven hiring tools may prejudice applicants based on these factors. These results highlight the need for inclusive data sets and stricter management.
