Comprehension:

In the following passage, some words have been deleted. Read the passage carefully and select the most appropriate option to fill in each blank.

The rate of utilisation of productive capacity in an economy is an important information for economic policy making. An estimate of capacity utilisation (CU) measures the extent of unused productive resources, i.e., economic slack, and helps assess the (1) _____ demand conditions and economic activity in the economy. Under rising demand pressure, productive units may increase the utilisation of installed capacity through higher use of (2) _____ resources and less productive factors of production, which may lead to a rise in the unit cost of production, hence output prices and (3) _____.

Official agencies, however, rarely compile statistics on capacity utilisation (CU). The limited official statistics on CU often also suffer from the limitations of low frequency, inadequate coverage and (4) _____ time lag. Researchers sometimes address this data gap issue indirectly through several alternative techniques. First, methods under the popular 'trend-through-peak' approach are applied. These methods assume that output would have achieved full capacity levels in the past, when output correspondingly (5) _____ witnessed local maximum.

SubQuestion No : 21

Q.21 Select the most appropriate option to fill in blank number 1.

Ans 1. minute

2. narrow

3. overall

4. specific
